- Bots Applications
- Developing Bots

Bots Architecture

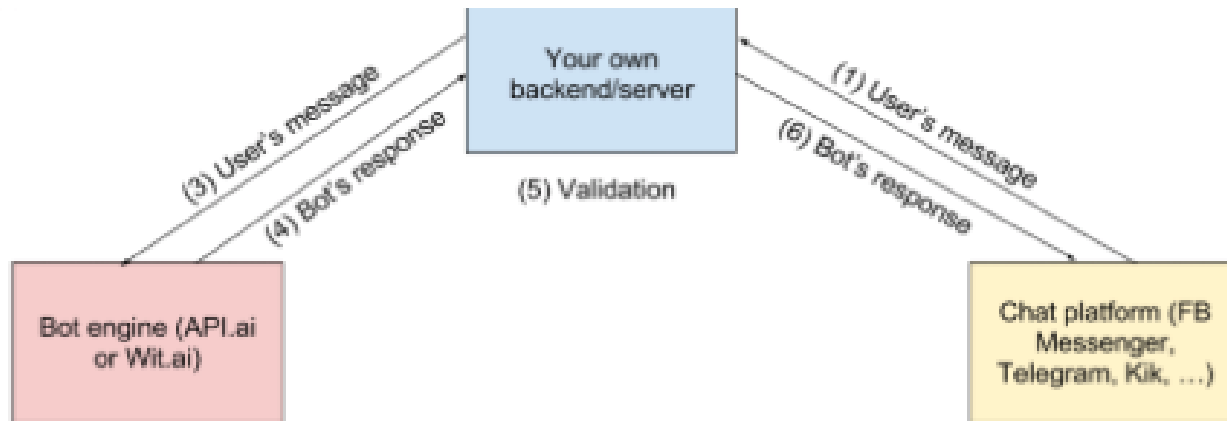

What is a Bot

Bot is a software that automates things we do

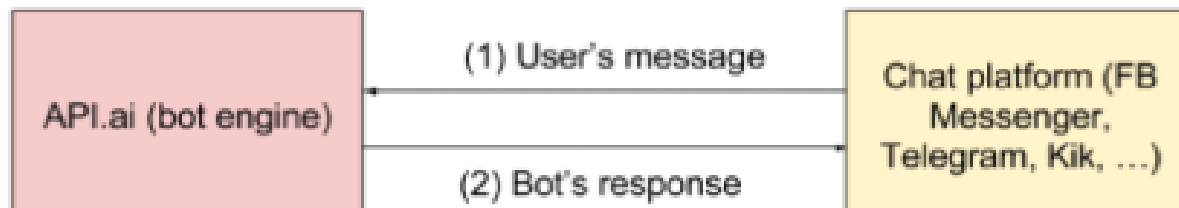

One example is Chatbot

New Channel for businesses to reach new audiences

BOT Architecture

Simple chatbot architecture with API.ai (DialogFlow)

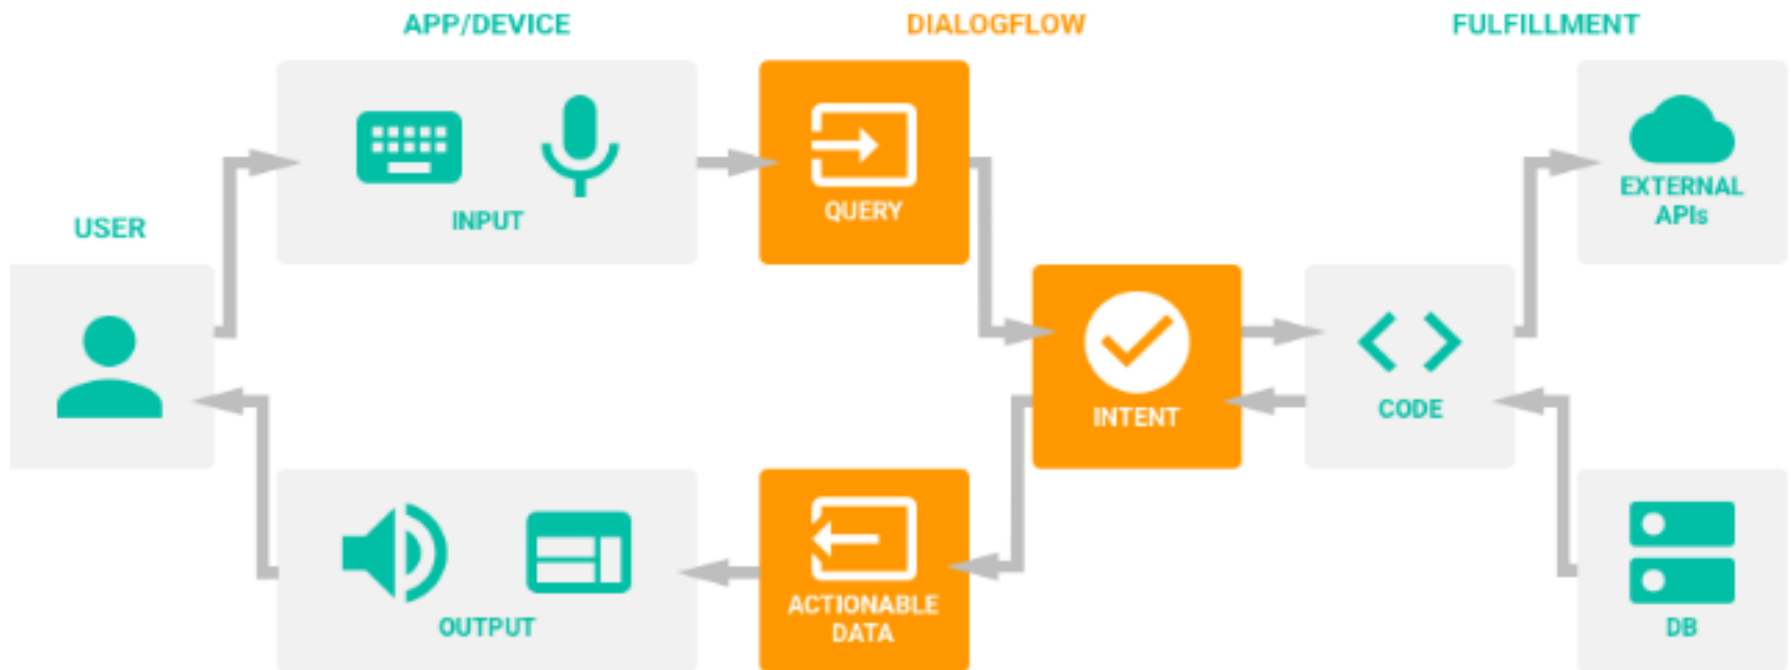

Agents

Agents are best described as NLU (Natural Language Understanding) modules. These can be included in your app, product, or service and transform natural user requests into actionable data.

The screenshot displays the Google Assistant configuration interface. At the top, there is a header bar with a hamburger menu icon on the left, the text 'Agent name' in the center, a blue 'CREATE' button on the right, and a vertical ellipsis icon on the far right. Below the header, the interface is divided into several sections. The first section contains two columns: 'DEFAULT LANGUAGE' with a dropdown menu set to 'English - en' and a subtext 'Primary language for your agent. Other languages can be added later.', and 'DEFAULT TIME ZONE' with a dropdown menu set to '(GMT+8:00) Asia/Hong_Kong' and a subtext 'Date and time requests are resolved using this timezone.'. The second section is titled 'GOOGLE PROJECT' and features a dropdown menu set to 'Create a new Google project' with a subtext 'Enables Cloud functions, Actions on Google and permissions management.'.

Agent Conversation Flow

Machine Learning

Machine Learning is the tool that allows your agent to understand a user's interactions as natural language and convert them into structured data. In Dialogflow terminology, your agent uses machine learning algorithms to match user requests to specific intents and uses entities to extract relevant data from them.

An agent “learns” both from the examples you provide in the Training Phrases section and the language models developed by Dialogflow. Based on this data, it builds a model (algorithm) for making decisions on which intent should be triggered by a user input and what data needs to be extracted. This algorithm is unique to your agent.

The algorithm adjusts dynamically according to the changes made in your agent and in the Dialogflow platform. To make sure that the algorithm is improving, your agent needs to constantly be trained using real conversation logs.

Bots Applications

What you can do with Bots

Get customized notifications. i.e. Send you relevant content as soon as it is published

Integrate with other services. i.e. enrich chats with content from external services like IMDB or Wikipedia

Create Custom Tools. Provide you with weather forecasts or translations

Build Social Services. Connect people or friends

Games. i.e. play chess, host a quiz game

Creating a Store

Customer is asking the same things

Takes too much time

Want to create a chatbot to answer frequent questions and take job interviews

Able to use time to do other important things

Create chatbots that learns

Developing Bots

How to Build a Chat Bot

Popular Bot Engines

- Google DialogFlow (formerly called API.ai) <https://cloud.google.com/dialogflow/>
- Microsoft Bot Framework <https://dev.botframework.com/>
- IBM Watson Assistant <https://www.ibm.com/cloud/watson-assistant/>
- Rasa (opensource) <https://rasa.com/>
- Chatfuel <https://chatfuel.com/>
- OnSequel <https://www.onsequel.com/>
- Botsify <https://botsify.com/>

Bot engines

Do the heavy lifting for you

Requirements

DialogFlow Account (Google account)

- DialogFlow Console:
- <https://dialogflow.cloud.google.com/#/login>

What is DialogFlow

Provides developers and companies advanced tools to build conversational interfaces for apps and hardware devices

Enables bots to recognize what we say and provide accurate response

Integrates Speech Recognition

Process Language, Recognizes user Intent, meaning the text, and helps manage the response

Free for certain number of queries

 Dialogflow

  

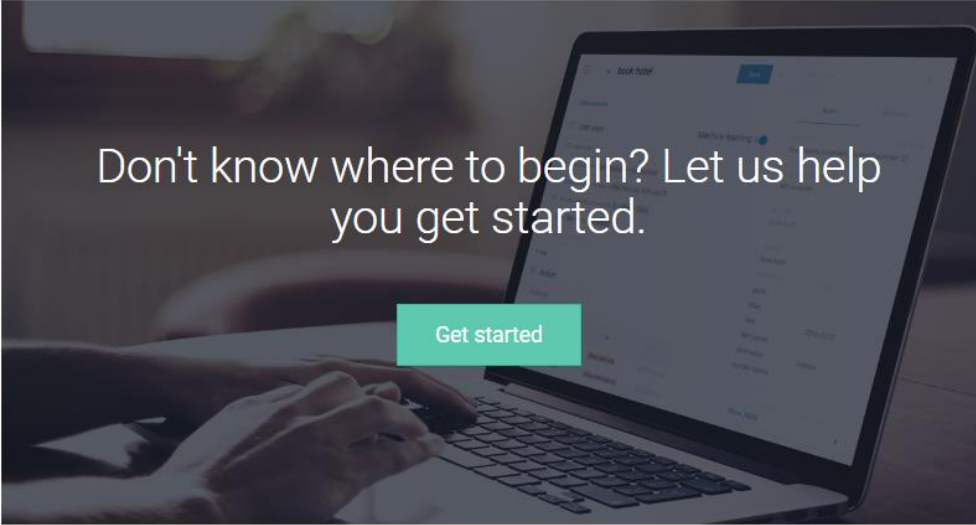

dialogflow.cloud.google.com/#/getStarted

 Welcome to Dialogflow!

Don't know where to begin? Let us help you get started.

[Get started](#)

Now it's time to create your first agent.

[CREATE AGENT](#)

Please, create at least one agent to access the test console

Dialogflow

dialogflow.cloud.google.com/#/newAgent

☰

Agent name

CREATE

DEFAULT LANGUAGE ?

English — en

Primary language for your agent. Other languages can be added later.

DEFAULT TIME ZONE

(GMT+8:00) Asia/Hong_Kong

Date and time requests are resolved using this timezone.

GOOGLE PROJECT

Create a new Google project

Enables Cloud functions, Actions on Google and permissions management.

Please, create at least one agent to access the test console

Dialogflow

dialogflow.cloud.google.com/#/agent/b78bd5ae-a625-43d0-8e4c-01cfb33a3379/intents

 **Intents** [CREATE INTENT](#)

Search intents

 Default Fallback Intent

 Default Welcome Intent

No regular intents yet. [Create the first one.](#)

Intents are mappings between a user's queries and actions fulfilled by your software. [Read more here.](#)

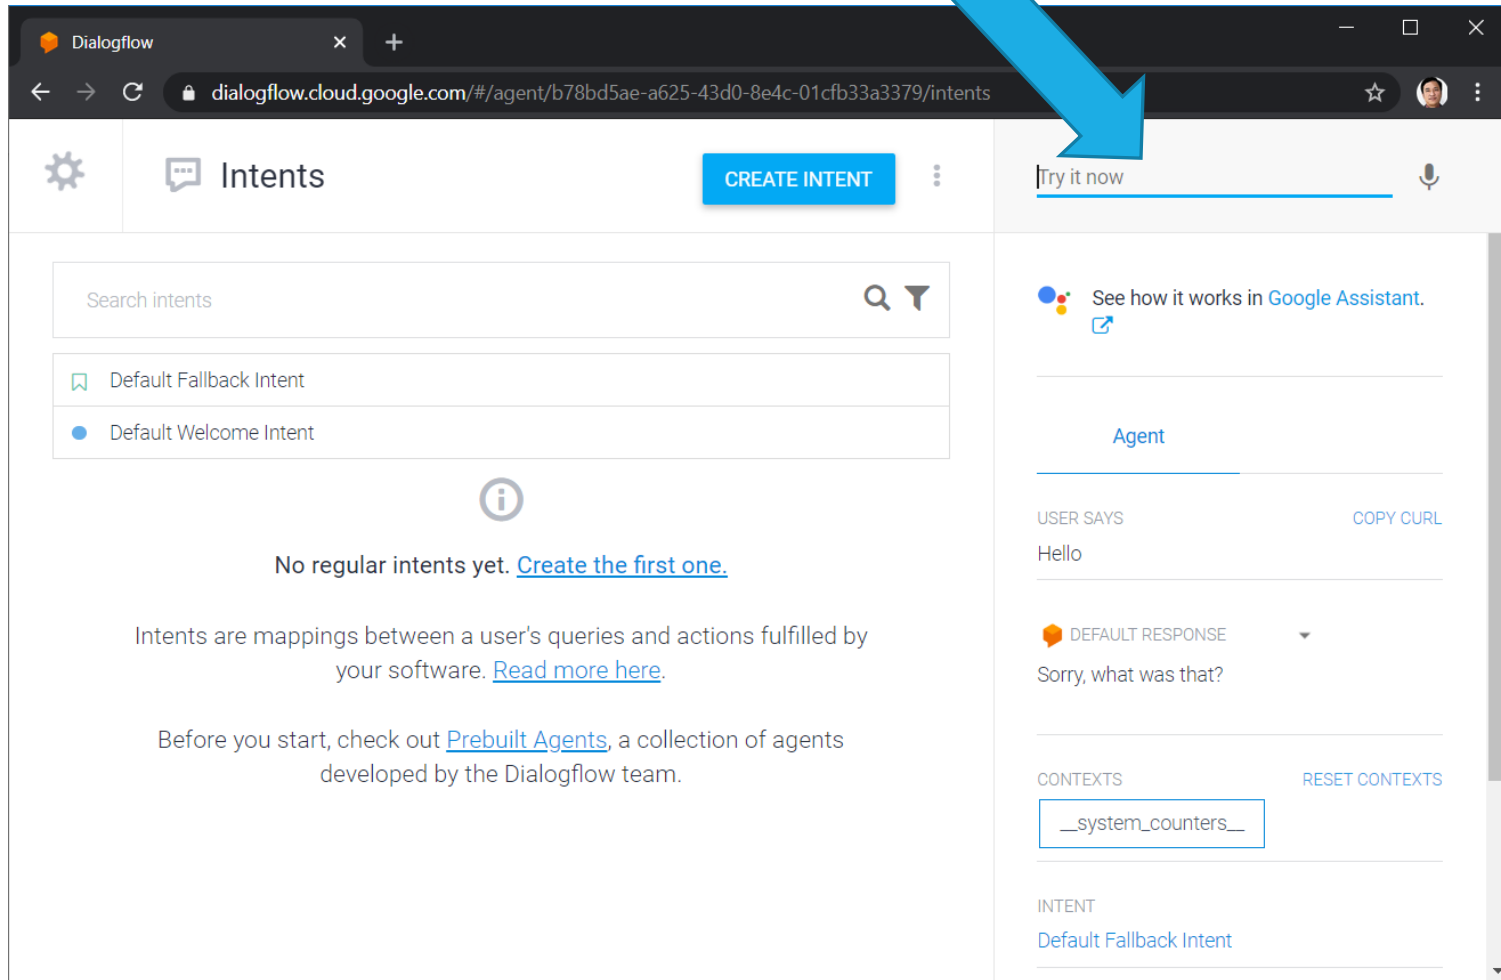

Before you start, check out [Prebuilt Agents](#), a collection of agents developed by the Dialogflow team.

Try it now

 Please use test console above to try a sentence.

 See how it works in [Google Assistant](#).

Type in "Hello"

Dialogflow

dialogflow.cloud.google.com/#/agent/b78bd5ae-a625-43d0-8e4c-01cfb33a3379/intents

Agent Design Guide

<https://cloud.google.com/dialogflow/docs/agents-design>

Objectives

When thinking about your agent's objective, consider the following points:

- What is your business trying to achieve?
- What will your users expect from your agent?
- How often will users interact with your agent?
- Balancing your business goals and user expectations will make for an overall better experience.

Summary
